Zahlungszweck: Symposium / 220270

Dear colleagues and friends

Stone disease is one of the most common urologic problems. Between 5 and 10% of the adult population will suffer from stones at least once during their lifetime. The introduction of extracorporeal shock wave lithotripsy some 20 years ago has revolutionized the treatment. But conversely to what was then believed, the controversy on the best treatment has not abated. New minimal invasive techniques and the limitations of ESWL have stimulated new interest in the field. After a long "boring" period, the treatment of stones has become interesting again. There are a variety of different treatment options today. Every treatment modality has its advantages and down-sides. The goal of this Symposium is to discuss how to treat patients with stone disease, to identify areas of controversy and to hopefully find consensus. We also want to enjoy the fantastic new technical developments which make the treatment so successful and enjoyable at the same time. Well known experts in the field of endourologic procedures will share their experience with us. During live surgery demonstrations they will show us tricks and show us how to avoid pitfalls. Discussions, case seminars and talks will stimulate our understanding of stone disease.

We do sincerely hope to provide you with up-to-date information on kidney and ureteral stones. Welcome to Liestal, the charming little town in the northwestern part of Switzerland.

P. Maurer

T. Gasser

PROGRAMME

SPEAKER

0915	Welcome note	
0930 – 1100	Session 1: Technical aspects: How to do it: Flexible Ureterscopy (flex.URS) Antegrade and retrograde procedure (ECIRS) Minimal Invasive Nephrolitholapaxy (MIP)	O. Traxer, Paris R. Scarpa and M. Scaffone, Turin U. Nagele, Tübingen
